# Complete session change report

Vehicle POS System - complete session change report | 17 October 2026

**What this report covers**

All changes made during this chat, from the first dashboard request through the final system checks. This is a simple explanation of what changed and how it helps you.

## 1. Dashboard cards and shortcuts

- Sales, purchases, profit, invoice dues and expenses open the related reports when clicked.
- The selected dashboard dates are carried into the related reports.
- Product totals and low-stock links open the matching product or stock information.
- Top-selling products, recent invoices and low-stock items link to their related details. Quick Actions open the correct add or sales pages.

## 2. Customer balances and customer lists

- A customer's starting amount is shown as **Opening Balance**, instead of being incorrectly called Sales Due.
- The Opening Balance line is hidden when the opening amount is zero.
- Invoice dues, opening balances and payments are kept separate in the customer PDF totals. The final balance includes the correct amounts.
- Customer search and filters were improved, including active or inactive customers, due or advance balances, and sorting.

## 3. The unfinished POS bill stays saved

- Selected products and quantities stay in the bill after refreshing or visiting another page and returning.
- The selected customer, store and bill discount are kept with the saved bill.
- Using the clear or cancel action still clears the bill intentionally.

# Bank accounts and payments

Know where your money is, which account was used, and why the balance changed.

## 4. Choose the correct bank account

- Bank payments can be linked to a specific business bank account instead of being mixed together.
- Bank selection was added to the relevant sales, POS, customer, supplier, purchase, preorder and expense payment flows, including split and bulk payments.
- You can add more bank accounts. The bank-selection area includes a note and a direct link to add a new bank.
- The chosen account is saved with the payment. Editing or reversing a payment also updates the original account correctly.

## 5. Bank Balances and Transfers page

- Added a page under **Accounting** to show bank balances and cash in hand.
- Select one account and filter its history by date, money in, money out, reference or reason.
- History shows the date, reference, reason, money in, money out and balance after each movement.
- The period summary shows the balance before the selected dates, money received, money paid out and the ending balance.
- Bank receipts increase the selected balance. Bank expenses and purchase payments reduce the selected balance.
- A balance can go below zero. Negative balances remain visible, with the history showing where the money went.

## 6. Transfers and opening balances

- Money can move from bank to bank, bank to cash, or cash to bank. Both sides record the same transfer and reason.
- Transfers move existing money; they are kept separate from income and expenses.
- You can set or correct a starting balance. The correction keeps its date and reason in the history.
- Older bank entries without a clear account can be reviewed and assigned, instead of being counted against several banks.

**Simple example**

If an account has Rs 10,000 and a bank expense is Rs 12,000, its balance becomes -Rs 2,000. The expense remains in the history so you can see the reason. This is an example, not your actual balance.

# Cheques and advance payments

Cheques now keep their details, their status and the bank account used when they pass.

## 7. Cheque details and downloads

- The Cheque Details page now offers **Download PDF** and **Download Excel**.
- Downloads include all cheques matching the search, status and date filters, rather than only the visible page.
- The exports include cheque numbers, dates, banks, parties, references, amounts and statuses, with other relevant processing details.
- Leading zeros in cheque numbers are preserved, such as 0002222.

## 8. Advance payments by cheque

- Choosing Cheque in Add Advance Payment now shows the required cheque-detail fields.
- Cheque details are saved and the cheque can be followed in cheque management, even before a sale is created.
- A pending advance cheque stays pending. It becomes available customer credit when it passes.
- A returned advance cheque does not create available customer credit.

## 9. Choose the bank when passing a cheque

- The Pass action opens a popup that asks which business bank account received the cheque.
- An active bank must be selected explicitly. A suggested bank does not silently replace that choice.
- The passed amount goes to the chosen bank, and the related customer, sale or preorder records stay connected.
- Supplier endorsement is kept separate from the bank chosen for clearing the cheque.
- The popup and cheque list were made easier to use on smaller screens.

**How to use it**

Open Sales > Cheque Details, find the cheque, click Pass, choose the bank that received it, then confirm. Use the PDF or Excel button to download the filtered cheque list.

# Clearer cash and daily reports

Better wording, running balances, sales totals and a choice of what to download.

## 10. Petty Cash Statement

- The petty-cash PDF was changed into a clearer statement with date, fund, reference or voucher, description, details, Money In, Money Out and Balance.
- **Balance Brought Forward** shows the money available before the selected period starts.
- Transactions are shown from oldest to newest, with a new balance after each movement.
- **Balance Carried Forward** shows the ending balance to take into the next period.
- The statement shows period totals and clear From Date and To Date values, including sensible dates when the filters are blank.
- Older opening deposits and transfers are handled so the same money is not counted twice. Excel can also download the full statement.

## 11. Daily Ledger sales and section selection

- Added a separate Sales Transactions section with Total Cash Sales, Total Cheque Sales, Credit Sales, Bank / Other Payments, Total Sales Value and Total Transactions.
- Invoice rows show the payment split. Quotations are excluded from actual sales totals.
- Cash, customer-cheque and petty-cash activity show the relevant movements and opening and closing balances. Passed cheques are counted once.
- Before a PDF or Excel download, a popup offers four checkboxes: Main Account (Cash), Customer Receivable (Cheques), Petty Cash and Sales Transactions.
- All four start checked. You can uncheck any section and download one section, any two, or another combination.
- PDF includes the selected sections. Excel puts the selected sections into separate sheets, with dates and totals.

## 12. Easier screens and downloads

- Daily Ledger cards and sections now use different colours and icons so they are easier to tell apart.
- Bank screens, cheque popups, filters and download controls were improved for phones, tablets and desktop screens.
- Wide report tables can scroll sideways inside their panel. Report filters no longer push the page off the screen.
- The stuck Loading overlay was fixed for PDF, Excel and other download actions. The page stays usable after a download.

# PDF and Excel across the system

Added shared download controls to 36 business screens, alongside the earlier specialised exports.

## 13. Screens covered by the new export options

| Area | Download coverage |
|---|---|
| **Business lists - 12 screens** | Products; Purchases; Sales; Quotations; Customers; Suppliers; Expenses; Sales Returns; Purchase Returns; Preorders; Preorder Report; Customer Preorder Report. |
| **Accounting - 11 screens** | Chart of Accounts; Account Transactions; Bank Reconciliation; Bank Balances and History; Account Ledger; Cash Book; Bank Book; Trial Balance; Balance Sheet; T Accounts; Owner Capital and Drawings. |
| **Reports - 13 screens** | Sales; Purchase; Stock; Expense; Profit and Loss; VAT; Receipts; Payments; Due Bills; Customer Balances; Top Selling Products; Never Sold Products; Unsold Products. |

Daily Ledger, Cheque Details, Petty Cash and the existing Tax Reports also have their relevant download options.

## 14. What the exports now do

- Download genuine **.xlsx Excel workbooks** where the new Excel option is offered, instead of a CSV file labelled as Excel.
- Keep the applied filters and include all matching records, rather than just the current page. Preorder status filters are kept too.
- Include relevant totals, report dates and business details. Reports with several tables can have several Excel sheets.
- Keep numeric amounts usable in Excel, preserve zeros at the start of reference numbers, and keep entered text from turning into an Excel formula.
- Apply the source screen's permission and hidden-data rules to the download as well.

**How to download**

Open the list or report, apply the filters you need, then use PDF or Excel. For Daily Ledger, choose the required sections in the export popup first.

# Extra fixes and final checks

Problems found during the wider check were also corrected.

## 15. Preorder stock handling

- Pending preorders can be saved even when the goods have not arrived yet.
- For new pending orders, stock is deducted when the order is completed as a sale.
- Existing stock reservations are tracked so older orders do not deduct stock twice.
- Cancelling or reopening an order does not create extra stock. A custom item that never used inventory does not invent stock when reopened.
- Completing an order without enough required stock is rejected safely, without leaving a partly created sale.

## 16. Other fixes found during checking

- Expense pagination was added so older expenses can be reached.
- The customer preorder report's due total was corrected.
- Never Sold and Unsold Products reports were repaired. Their period and supplier controls now connect to the report, and quotations do not count as sales.
- Older quotations are no longer accidentally hidden by an incorrect today-only check.
- Product stock shown for a selected store now adds the related stock rows together.

## 17. Checks completed at the end of the work

- **183 automated tests passed.** These include payments, bank balances, cheque handling, saved POS bills, report totals, exports and preorder stock behaviour.
- PHP syntax checks passed for the changed application and test files.
- Page-template compilation and the production build passed.
- Populated screens were checked at phone, tablet and desktop sizes. Wide tables and narrow-screen filters were checked.
- Actual PDF and Excel download clicks were checked in the browser. The page stayed usable and the Loading overlay remained hidden.
- Sample PDFs were rendered and reviewed. Excel files were checked for data, totals, references and permissions.

**Completion and scope**

The changes were completed in the local project during this chat. The required local database updates were applied. Browser checks used sample pages and test data. Publishing these changes to the live website was outside this session.

Prepared from the full chat history, the updated project and the recorded final checks. This is a change report, not a statement of your actual business balances.
